Source: China Data Center, University of Michigan

Founded in 1997, the University of Michigan China Data Center serves as an international center for advancing the study and understanding of the People's Republic of China. The Center integrates historical and social and natural science data in a geographic information system with the goal of supporting research in the human and natural components of local, regional, and global change; and promoting quantitative research on China, collaborative research in spatial studies, and the use and sharing of China data in teaching and research. The China Data Center partners with several Chinese government agencies and companies, and is exclusively authorized by the National Bureau of Statistics of China, in distributing China statistical data and publications and providing data services outside of China. The work of the Center is intended to facilitate comparative and interdisciplinary uses of the data, enabling both nonspecialists and China scholars to understand and utilize these data, and enhance knowledge of China.

Dataset: National Accounts from the China Yearly Statistics (National/Subnational) Database

Reports various measures of the economic activity of the People’s Republic of China, including indicators related to Gross Domestic Product (GDP) and household consumption. GDP is specified by industry structure: primary industry refers to extraction of natural resources; secondary industry involves processing of primary products; and tertiary industry provides services related to production and consumption. Values for GDP and household consumption are reported both in yuan and as percentages of 1978 and preceding year values. Data are presented at the national level and for all provinces, segmented by cities and counties within provinces, and for all counties.

Provides yearly historical indicators of social and economic characteristics of the People's Republic of China. Included are national- and subnational-level statistics dating in some cases to the 1950s on population; national accounts, including Gross Domestic Product and Balance of Payments; employment, labor, and wages; financial and banking data; price indices; government income and expenditures; agriculture; industry, construction, and transportation; domestic and foreign trade; education; health; and natural resources. Statistics are provided for the nation in total,
and, variously by indicator, for all provinces, cities and counties within provinces, all cities, and all counties. The data are collected primarily by the National Bureau of Statistics of China, who is charged with the administration of the national statistical information system of China.
